

PRODUCT INFORMATION SHEET

DVD products are manufactured to the highest possible standards using modern manufacturing processes and materials. With the appropriate in-home care and maintenance they will provide years of trouble free performance.

DVD *Acrylic Reflections*

Issue Date. June 2013 rev. 03/14

Care and Maintenance Instructions

Please read this information sheet before removing any Protective Film.

When using *DVD Acrylic Reflections* **DO NOT** Remove the Protective film until you have read this information sheet and all trade works on site are completed.

Your *DVD Acrylic Reflections* Acrylic Doors, Drawer Fronts & Panels come complete with protective film. Once the film is removed, the curing process is initiated. The final curing process of the Gloss Acrylic surface can take approx. 72 Hours for the surface to be fully cured. The Protective Film can also create static that may attract dust and other abrasive material to the surface. During the curing process the acrylic surface is most vulnerable to micro-scratching damage if an incorrect cleaning process is used.

We, therefore recommend that upon removal of the protective film, a light spray of **VuPlex®** be applied to the surface. Following the directions on the aerosol: SHAKE CAN WELL Spray on Lightly. Wipe off and buff using a light circular motion with a soft Microfibre Glass cloth. This removes any residue left from the protective film, production processes and helps the curing process.

About **VuPlex®**

VuPlex® was originally developed for use in aviation. **VuPlex®** is quite simply the most effective product you can buy for cleaning, protecting and polishing clear and coloured plastics.

VuPlex® acts as a safe but powerful cleaner that will not damage the surface and is very effective against most common stains that may occur within the household.

VuPlex® removes static from the surface that will maintain a cleaner finish for longer and avoid abrasive attraction.

VuPlex® works by depositing a coat of polymer on the surface that's aids in the curing process and acts as an invisible barrier against fine scratches. In abrasive tests, **VuPlex®** has been found to more than double abrasive resistance. **VuPlex®** also seals in the surface slowing damage from everyday use, sunlight and other chemicals.

VuPlex® Has the ability to restore older acrylic surfaces that have lost the colour gloss and luster by filling any fine surface scratches and recreating the WOW factor.

For regular cleaning we recommend you continue to use **VuPlex®** using a clean Microfibre Glass cloth. Use by spraying over the surface lightly and then wiping in a light circular motion.

VuPlex® is available from your door supplier or direct from **DVD**
